- 1881** K. Hattori, predecessor of today's Seiko Holdings Corporation, established.
- 1892** Seikosha clock supply factory established; production of wall clocks begins.
Seikosha builds the first pocket watch.
- 1913** Production of Laurel, the first wristwatch made in Japan begins.
- 1953** SEIKO sponsors Japan's first TV commercial.
- 1959** SEIKO commercializes quartz clocks for broadcasting use.
- 1964** SEIKO develops the portable quartz chronometer and Seiko serves as Official Timer for the "Games of the XVIII Olympiad" held in Tokyo.

- 1968** SEIKO achieves the highest ever score in the Geneva competition and is awarded the "best mechanical wrist chronometer".
- 1969** Introduction of cal. 6139, the world's first automatic chronograph watch equipped with both vertical clutch and column wheel.
Introduction of the world's first quartz watch, "SEIKO Quartz Astron" cal. 3500.
- 1982** Introduction of the world's first TV watch cal. T001.
- 1988** Introduction of the world's first "Auto Quartz" watch cal. 7M42. (later renamed as "Kinetic").
- 1992** Introduction of 1/100th analogue quartz chronograph watch cal. 7T59.

1999 Introduction of the world's first Spring Drive watch cal. 7R68 (hand winding).

Introduction of the Ultimate Kinetic Chronograph cal. 9T82.

2005 Introduction of the Kinetic Perpetual cal. 7D48.

Introduction of the Spring Drive cal. 5R series (automatic winding).

2006 Introduction of the world's first watch with electrophoresis display module cal. G510.

Introduction of the Credor Spring Drive Sonnerie cal. 7R06.
Suggested retail price: 15 million Japanese Yen.

2007 Introduction of the Kinetic Direct Drive cal. 5D44.

Introduction of the Spring Drive Chronograph cal. 5R86 equipped with both vertical clutch and column wheel.

2009 Introduction of the Chronograph Perpetual.

2010 World's first EPD watch with an active matrix system.

2011 SEIKO's 130th Anniversary

Served as Official Timer of the IAAF World Championships Daegu 2011.

2012 SEIKO introduces the world's first Solar Powered GPS watch that supports all internationally recognised timezones.

2013 100 years of SEIKO Wrist watches marked by a collection of Special Edition models.

2014 SEIKO introduces the world's first Solar GPS watch with a chronograph.

THE SEIKO WEBSITE

The SEIKO website is designed to provide customers, retailers and consumers with instant access to information about SEIKO. Log onto www.seiko.com.au and click the following links to find out all there is to know about the world's leading watch manufacturer.

Products – Learn more about the SEIKO Premium Collection or explore the entire SEIKO product range.

Support – Designed with retailers in mind, this section provides service information, instruction manuals you can download and 'frequently asked questions' to aid in trouble shooting, procedures for sending back repairs for prompt and efficient service.

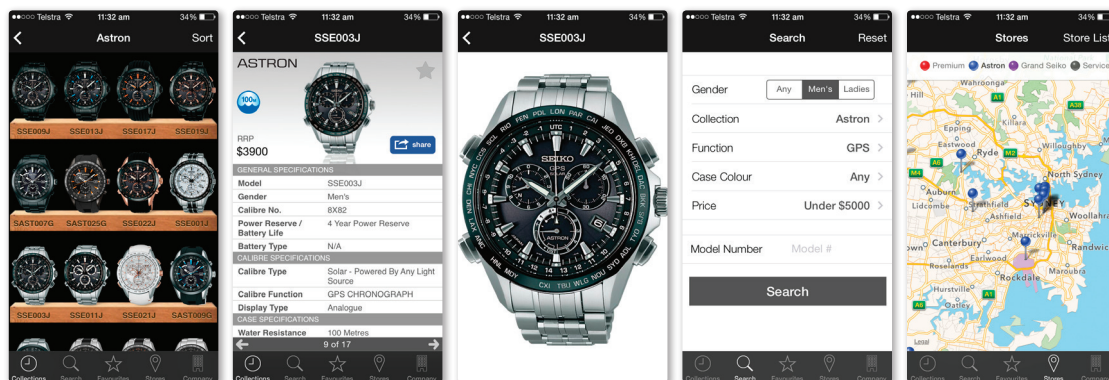

About Us – Discover SEIKO's history from humble beginnings in 1881 and the rise that carried SEIKO to new heights and international renown. Learn about corporate structure, global networks and SEIKO's extensive involvement in sports timing.

Corporate – This section outlines specialised services that include the printing of company logos on the dial of a watch or clock, engraving and personalised messages, as well as customised packaging and more.

SEIKO will continue to grow and evolve and so too will www.seiko.com.au, so keep checking for regular updates. Please send any comments you have to info@seiko.com.au, all feedback is welcome.

www.seiko.com.au

THE SEIKO APP

Find 'SEIKO Australia' in the APP Stores to view the entire SEIKO range. Each watch details specifications, pricing, and a clear image for consumers to view.

There is also important contact information regarding our service centres, online sales policy, and a brief history of SEIKO.

The App is free for Apple and Android products.

BELOW ARE THE ABBREVIATIONS AND SYMBOLS YOU WILL FIND IN THIS CATALOGUE

- ADVERTISED MODEL** — Advertised model
-  — Solar
-  — New release model
-  — Stainless steel case
-  — Water resistance
-  — Titanium
-  — Ceramic

- SSE003J \$3900** — Reference number and price
- GPS SOLAR CHRONOGRAPH** — Watch type
- TCE.TIHICDCWR (10BAR)** — Case material (refer to Abbreviations page)
- SAPPHIRE GLASS** — Glass type
- M0VR111H0** — Band reference
- 8X82** — Calibre Number

TTIHC.TI	Combined TI and HC bezel, TI middle and TI back
WR	Water Resistant
XL	Lumibrite hands and hour markers

ACCURATE TIME, HARNESSING THE POWER OF GPS

Once a day when fully charged, Seiko Astron receives the time signal automatically and, on demand, connects to four or more of the GPS satellites that orbit the earth*1, thus pinpointing its position and identifying the time zone and the exact time*2*3. The hands adjust automatically to the correct local time with atomic clock precision.

NO BATTERY CHANGE NEEDED. EVER

Astron is entirely self-sustaining and takes all the power it needs just from light. There is no need, ever, to change a battery.

PERPETUAL CALENDAR CORRECT UP TO FEBRUARY 2100

Astron has a perpetual calendar that is accurate up to February 2100, irrespective of leap years.

IN-FLIGHT MODE (✈)

In order to avoid any interference with the operation of electronic devices in an airplane, in-flight mode is available when boarding a plane. In the in-flight mode, the GPS signal reception function will not work.

DAYLIGHT SAVING TIME (DST) FUNCTION

In areas where Daylight Saving Time (DST) applies, the time can be adjusted manually.

MULTI-INDICATOR

The multi-indicator has four functions:

- GPS signal reception display
- Power reserve indication
- In-flight mode (✈) on/off indication
- DST (Daylight Saving Time) on/off indication

THE WORLD'S FIRST GPS SOLAR WATCH

Thanks to the creation of an ultra-low consumption GPS module, Seiko has been able to create a watch that can receive GPS signals and identify time zone, time and date using the global network of GPS satellites. This breakthrough timepiece inherits the name of the Astron. Like its celebrated 1969 predecessor which was the world's first quartz watch, the new Astron ushers in a new age of timekeeping technology.

THE SECRET IS IN ENERGY MANAGEMENT

Only Seiko's advanced energy-efficiency technology could invent the miniature GPS receiver that requires so little energy to receive GPS signals from four or more satellites. And only Seiko's advanced IC circuitry expertise could make it possible for watch to see the world as divided into one million 'squares' and allocate a time zone to each.

SEIKO'S HISTORY OF ENERGY MANAGEMENT

- 1969: The first Astron was the world's first quartz watch. It was made possible by a low-drain stepping motor.
- 1977: Seiko made its first ever solar watch, using just the power of light.
- 1988: Seiko Kinetic was the first watch to convert mechanical energy into electrical with a rotor that spins at up to 100,000 rpm.
- 1999: A mechanical watch with a new type of escapement, Spring Drive is a technology unique to Seiko. It uses so little electrical power that, if everyone on earth wore Spring Drive, the total energy used would power just one light bulb.
- 2012: The new Astron: The world's first GPS solar watch, which is so energy efficient that it can connect to the GPS network using just the power of light.

*1 The watch has to be under an open sky with good visibility, where the GPS signals can easily be received.

*2 Cal.7X52: Time zone data as of January 2012. Cal.8X82: Time zone data as of January 2014.
Changes to time zones occurring after these dates are not programmed and manual adjustment may be required.

*3 If the time zone is adjusted near a time zone boundary, the time of the adjacent time zone may be displayed. To adjust the time zone, use the manual time zone(city) selection mode.

GPS SOLAR CHRONOGRAPH

Case Size
45mm

SSE001J \$5700
GPS SOLAR CHRONOGRAPH, TCE.TIHCDCWR, (10BAR), XL,
SAPPHIRE GLASS, LIMITED EDITION 7000 PIECES WORLDWIDE,

NOVAK DJOKOVIC

THE ASTRON GPS SOLAR CHRONOGRAPH.
THE WATCH THAT ADJUSTS
TO YOUR TIME ZONE*.

ASTRON

By connecting to the GPS network, the new Astron adjusts at the touch of a button to your time zone* and, by taking all the energy it needs from light alone, never needs a battery change.

GPS
SOLAR

*Time zone data as of January 2014. Time zone can be also manually adjusted as required.

OPERATING INSTRUCTIONS

SOLAR GPS (7X52)

- Solar – Powered by any light source.
- GPS Connectivity – Connect to satellites to pinpoint your position and adjust timezone accordingly*
- Flight Mode – turn on and off during flights.
- Perpetual Calendar – Adjusts the date automatically until February 2100 including leap years and short months
- World Time
- Power Save Mode – Astron sleeps when not in sufficient light to conserve energy, and when exposed to light will wake up and relay to the current time.

* Time zone data as of January 2012. Changes to time zones occurring after this date are not programed and manual adjustment may be required.

HOW TO ADJUST TIME USING GPS SIGNALS

1. Ensure you are outdoor under an open sky with good visibility. Away from trees, buildings bridges etc. Ensure Astron is out of flight mode – follow the steps detailed later in this guide.
2. Press and hold **BUTTON B**. The second hand will move to the 60 second mark and stop briefly. It will then move to the 30 second mark. Once the second hand moves to the 30 second mark release **BUTTON B**.
3. The second hand will then move around the dial pointing at the hour marker to indicate how many satellites it is connected to e.g. the 2nd hour marker is 2 satellites, the 4th hour marker is 4 satellites. A minimum of 4 satellites is required for a successful timezone adjustment. The GPS Signal and Time change can take up to 2 minutes.
4. After Astron connects to satellites the second hand will move to Y for a successful connection, or N for an unsuccessful connection. The Y & N are indicated on the right side of the inner ring between the 2 and 3 hour marker, and the 3 and 4 hour marker respectively.
5. The main hands on Astron will move to the correct time based on your position.

LEAP SECOND ADJUSTMENT

The leap second is to compensate for deviations from the universal time (UT) which is astronomically determined and the 'International Atomic Time (TAI)'. 1 second may be added/deleted once a year or every few years.

The indicator hand displays as shown above when GPS signals are received. At this time the second hand points to any of the 0-18-second positions to indicate the waiting time until the leap second data reception in minutes.

After the leap second data update Astron will continue with the GPS time adjustment.

MANUAL TIME ADJUSTMENT & WORLD TIME FUNCTION

In places where the GPS timezone change is not possible Astron can be set manually without the need to connect to a satellite. This function can also be used as a World Timer.

1. Press and hold **BUTTON C**. The second hand will move to the current timezone.
2. Press **BUTTON B** to advance timezones or press **BUTTON C** to decrease timezones. The second hand will move and point to the next timezone detailed

on the inner ring, or city detailed on the bezel (model dependant) and instantly move the hands to that timezone.

3. Once you have selected your desired timezone press **BUTTON A**.

Use the below table to discover world timezones.

The following lists show the relationship between displays of the bezel and dial ring and time difference from the UTC. Please refer to the second hand positions below to set the time zone or to check the time zone setting. The time zone of each region is as of January 2012.

Daylight Saving Time (DST) is in effect in time zones with a ★ mark. In the Lord Howe Island time zone in Australia with a 1/2 mark, the time is advanced by 30 minutes while Daylight Saving Time (Summer Time) is in effect. This watch corresponds to DST in the Lord Howe Island time zone.

Display of time zone														
City code	Position of the second hand	City name	UTC ± hours		City code	Position of the second hand	City name	UTC ± hours		City code	Position of the second hand	City name	UTC ± hours

HOW TO USE THE DAYLIGHT SAVING FUNCTION

Some areas have daylight savings where the time is set forward to gain an extra hour of sunlight. Astron has an easy daylight saving function that turns daylight saving on or off.

1. Press **BUTTON A**. The indicator hand will move to either DST (for Daylight Savings on) or the ' ' (for Daylight Savings off).
2. Press and hold **BUTTON C** for approx. 3 seconds to turn it either on or off.
3. The main hands will move forward (on), or backward (off) one hour.

FLIGHT MODE

GPS reception may influence the aeroplanes electronic equipment so GPS Astron has a flight mode you can activate when travelling on an aeroplane.

TURN FLIGHT MODE ON OR OFF

1. Press **BUTTON B**.
2. Then press and hold **BUTTON C**.
3. The indicator hand will move to the aeroplane when Flight Mode is switched on or will move to the Power Reserve Indicator when it is switched off.

HOW TO SET THE SUB-DIAL

The bottom sub-dial displays the time in a 24-hour system. This dial works independently of the main hands, so it can be set on a second timezone.

To change the sub dial time

1. Unscrew the crown. Pull the crown out to the first click.
2. Press **BUTTON B** to advance the time, or press **BUTTON C** to decrease the time. When the button is kept pressed for 2 seconds or longer the sub-dial hands will move continuously until a button is pressed again then they will cease moving.

SOLAR GPS CHRONOGRAPH (8X82)

- Solar – Powered by any light source.
- GPS Connectivity – Connect to satellites to pinpoint your position and adjust timezone accordingly*
- Flight Mode – turn on and off during flights.
- Perpetual Calendar – Adjusts the date automatically until February 2100 including leap years and short months
- Stopwatch – Measures 6 hours in 1/5th of a second increments with split/lap time.
- World Time
- Power Save Mode – Astron sleeps when not in sufficient light to conserve energy, and when exposed to light will wake up and relay to the current time.

* Time zone data as of January 2014. Changes to time zones occurring after this date are not programed and manual adjustment may be required.

HOW TO ADJUST TIME USING GPS SIGNALS

1. Ensure you are outdoor under an open sky with good visibility. Away from trees, buildings bridges etc. Ensure Astron is out of flight mode – follow the steps detailed later in this guide.
2. Press and hold **BUTTON B**. The small second hand will move to the 60 second mark and stop briefly. It will then move to the 30 second mark. Once the small second hand moves to the 30 second mark release **BUTTON B**.
3. The small second hand will then move around the dial pointing at the number detailed on the outer ring of this indicating how many satellites it is connected to. A minimum of 4 satellites is required for a successful timezone adjustment. The GPS Signal and Time change can take up to 2 minutes.
4. After Astron connects to satellites the small second hand will move to Y for a successful connection, or N for an unsuccessful connection. The Y & N are indicated inside the small second hand dial.
5. The main hands on Astron will move to the correct time based on your position.

MANUAL TIME ADJUSTMENT & WORLD TIME FUNCTION

In places where the GPS timezone change is not possible Astron can be set manually without the need to connect to a satellite. This function can also be used as a World Timer.

1. Pull the crown out to the first click. The 1/5th of a second hand will move and point to the current timezone set.
2. Turn the crown forward or backward and the 1/5th of a second hand will point to the next timezone detailed on the inner ring, or city detailed on the bezel (model dependant) and instantly move the hands to that timezone.
3. Once you have selected your desired timezone push the crown back in flush to the case.

Use the below table to discover world timezones.

The following list shows the relationship between displays of the bezel and dial ring and time difference from the UTC. Please refer to the second hand positions below to set the time zone or to check the time zone setting.

DST (Daylight Saving Time) is used in time zones with a * mark. In the Lord Howe Island time zone in Australia with a * mark, the time is advanced by 30 minutes while DST (Daylight Saving Time) is in effect. This watch corresponds to DST in the Lord Howe Island time zone.

* Each time zone is based on data as of January 2014.

City code	Display of time difference	City name	UTC ± hours	City code	Display of time difference	City name	UTC ± hours	City code	Display of time difference	City name	UTC ± hours
LON	UTC	★ London	0	BJS	8	Beijing	+8	HNL	-10	Honolulu	-10
PAR	1	★ Paris	+1	—	*	Eucia	+8.75	—	*	Marquesas Islands	-9.5
CAI	2	★ Cairo	+2	TYO	9	Tokyo	+9	ANC	-9	★ Anchorage	-9

—	*	★ Tehran	+3.5	SYD	10	★ Sydney	+10	DEN	-7	★ Denver	-7
DXB	4	Dubai	+4	—	*	★ Lord Howe Island	+10.5	CHI	-6	★ Chicago	-6
—	*	Kabul	+4.5	NOU	11	Noumea	+11	NYC	-5	★ New York	-5
KHI	5	Karachi	+5	—	*	Norfolk Island	+11.5	CCS	*	Caracas	-4.5
DEL	*	Delhi	+5.5	WLG	12	★ Wellington	+12	SCL	-4	★ Santiago	-4
—	*	Kathmandu	+5.75	—	*	Chatham Islands	+12.75	—	*	★ St. John's	-3.5
DAC	6	Dhaka	+6	TBU	13	Nuku'alofa	+13	RIO	-3	★ Rio de Janeiro	-3
—	*	Yangon	+6.5	CKI	14	Kiritimati	+14	FEN	-2	Fernando de Noronha	-2
BKK	7	Bangkok	+7	—	-12	Baker Island	-12	PDL	-1	★ Azores	-1
—	—	—	—	MDY	-11	Midway Islands	-11	—	—	—	—

The displays of city code and the time difference from UTC are Subject to change owing to models. * between figures of the display of time difference shows that there is the time zone on that place.

HOW TO USE THE DAYLIGHT SAVING FUNCTION

Some areas have daylight savings where the time is set forward to gain an extra hour of sunlight. Astron has an easy daylight saving function that turns daylight saving on or off.

1. Pull the crown out to the first click. The bottom dial's hand will move to either DST (for Daylight Savings on) or the ' ' (for Daylight Savings off).
2. Press and hold **BUTTON B** for approx. 3 seconds to turn it either on or off.
3. The hands will move forward (on), or backward (off) one hour.

FLIGHT MODE

GPS reception may influence the aeroplanes electronic equipment so GPS Astron has a flight mode you can activate when travelling on an aeroplane.

TURN FLIGHT MODE ON OR OFF

1. Press and hold **BUTTON A** for approx.. 5 seconds.
2. The indicator hand in the bottom dial will move to the image of the plane located on the left side of the outer ring.
3. To turn flight mode off, press and hold **BUTTON A** for approx. 5 seconds. The hand will move back to the power reserve indicator

STOPWATCH MODE

When using the stopwatch the hands will move and behave differently to normal time mode.

- The large second hand becomes the 1/5th of a second hand
- The dial on the right side is the Stopwatch minute hand
- The bottom dial and indicators become the hour hand

1. To start the stopwatch press **BUTTON C**
2. To stop the stopwatch press **BUTTON C**
3. To reset the stopwatch press **BUTTON D**

SPLIT/LAP TIME

While the stopwatch is in operation press **BUTTON D** to split time. The stopwatch hands will freeze to indicate time. Press **BUTTON D** to release split time and the stopwatch will catch up and continue on to real time.

NOTE – While the stopwatch is in operation the GPS timezone function will not work.

ADVERTISING & MARKETING

3 YEAR GUARANTEE

All SEIKO watches and clocks are covered by a 3 year guarantee. The guarantee covers defects in the material and workmanship from the date of purchase. As a SEIKO authorised dealer it is your responsibility to correctly fill in the guarantee with all the information required. The diagram on the right shows where to find the relevant information on the watch caseback.

In the case of incorrectly used guarantees, return them to SEIKO Australia or hand them to your SEIKO Australia Representative for free replacement, otherwise a charge for new guarantees will be applicable.

Global Service Network

SEIKO's dedication to quality extends throughout its service network in all corners of the world, extending the same dedication to excellence and the highest quality service to SEIKO customers everywhere.

For over 100 years SEIKO has stood for quality – in manufacture, design and service. Today, our SEIKO service centres strive to offer the highest standard of after-sales service and ensure lasting consumer satisfaction. In the Oceania Region, SEIKO Australia Pty Ltd has a network of branch offices, service centres and authorised service agents throughout Australia, New Zealand, Papua New Guinea, and the Pacific Islands.

For service, repairs and spare parts enquiries, please phone 1300 363 575 or email service@seiko.com.au
